Work Experience

Technical Consultant | Morgan Stanley — December 2024 – Present
Cyber Data Risk & Resilience Division, Bengaluru

Employed by **Accolite** as a **Senior Software Engineer** working for Morgan Stanley account.

Tech Stack: Java, Spring, Angular, Python, SQL, XML, Git

- Contributing to the Security Design Development team by resolving bugs, new feature releases across 2-week sprint cycles to enhance security compliance.
- Built a Timeline feature to track and display security design changes, with fast data loading and globally visible estimated times adjusted to the EST timezone.
- Developed an Email feature using Spring Framework, enabling secure communication between internal services.
- Worked with migration of legacy UI (AngularJs) to Angular, ensuring seamless backend compatibility and performance optimization with 35% performance boost.

Education

Bachelors in Electronics and Computer Engineering — September 2020 – June 2024
Thapar Institute of Engineering and Technology, Patiala
CGPA: 7.25/10

Relevant Coursework: Data Structure & Algorithms, OOP, Operating System, Data Science, DBMS, Deep Learning, Blockchain, Cryptography, Corporate Finance.

Projects

QueryWear: Natural Language to SQL System | GitHub Repository — September 2024 – January 2025
Tech Stack: Google PaLM, LangChain, Streamlit, Hugging Face, ChromaDB, MySQL

- Innovated a natural language interface using Google PaLM and LangChain to translate queries into the database.
- Boosted query accuracy by 89% with Hugging Face models and ChromaDB for faster similarity searches.
- Accelerated SQL translation accuracy by 55% using few-shot learning and boosting database efficiency by 20%.

HealthFirst: Healthcare Platform | GitHub Repository — March 2023 – October 2023
Tech Stack Used: Python, C++, React.js, MySQL

- Collaborated in a team Capstone Project, focusing on backend development and ML integration.
- Expanded API capabilities, streamlining patient data retrieval, improving system efficiency by 40%.
- Optimized a Chatbot using Random Forest and Decision Trees for disease prediction. Worked closely on data processing and model optimization, improving diagnostic accuracy by 18%.
- Engineered backend-database integration improving data retrieval speed by 40% using indexing and caching.

Technical Skills

Programming & Development: Java, Python, C++, TypeScript, SQL
Frameworks: Spring, Angular, React.js, LangChain, Hugging Face
ML & Security: TensorFlow, NLP, Random Forest, Decision Trees, Cybersecurity
Database & Tools: MySQL, PostgreSQL, Excel, Git, Postman API, Linux

Achievements

IdeaThon | Runner-Up — March 2023
Standard Chartered Finance & Technology Connect

- Pioneered a blockchain-based pooled collateral system using smart contracts, enabling 100+ users to collectively secure loans and distribute interest proportionally.
- Strengthened Proof of Work for consensus, ensuring secure transactions and decentralized interest distribution.
